

Transcript of the video snippet commented by LegeNet that it is **"Interesting how uninformed beliefs were made to override scientific fact contributing to the biggest medical scandal in a century. As the unscientific uninformed meddled in censoring fields they had zero competence in they should be criminally charged for quackery & mass murder."**

UnHerd's Freddie Sayers:

In the case of science, challenges to the orthodoxy are the be all and end all of science, you need that in order to reach good outcomes. And I'm afraid, the huge failures of the official response to COVID 19, is the perfect demonstration of this.

In fact, in Claire Melford's lecture that she gave at the LSE. One of the examples she hand picked to showcase the good

work of the Global Disinformation Index, was a particular example on a Spanish language website from June 2021.

About the Delta variant of "This is a Spanish language site Alerta Digital, talking about COVID-19.

how a third of deaths in the United Kingdom from the Delta variants are amongst those people who are vaccinated, which is clearly untrue. And it's Chipotle who has been caught next to this ad unwittingly, and unfortunately for them has funded this highly dangerous, disinformation about vaccines." "Highly dangerous disinformation about vaccines", is what Claire Melford calls it but a little fact checking, tells a bit of a different story. The statistic being reported in that Spanish language website comes from a June 2021 Public Health England report into COVID variants that in Table six on page 15, sets out the 42 known deaths from the Delta variant that happened in 2021. Between January and June.

Of those it sets out 23 were unvaccinated. 7 were vaccinated with one shot, and 12 were fully vaccinated. In other words, 29% roughly a third, were fully vaccinated and an additional 17% were partially vaccinated.

Making a total by my count of around 45%, who were vaccinated to some degree. So, the headline on the Spanish language website claiming roughly a third was not inaccurate at all, if anything, it underplayed the severity of the story, the only disinformation in that example is in fact GDI's claim that it's untrue, which still stands uncorrected on YouTube.
